OBJECTIVE:

Master's graduate in Computer Science and Engineering from University at Buffalo. Full Stack Developer with hands-on experience building scalable, data-driven web applications using MongoDB, Express.js, React, and Node.js. Skilled in RESTful API development, cloud deployment, CI/CD pipelines, and workflow automation. Passionate about developing high-performance, user-centric applications using modern web technologies.

EDUCATION

University at Buffalo

Aug 2024 – Dec 2025

Master of Science, Computer Science and Engineering

Dayananda Sagar Academy of Technology

Dec 2020 – May 2024

Bachelor of Technology, Computer Science and Engineering

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript

Frontend: React.js, HTML5, CSS3, Bootstrap

Backend: Node.js, Express.js, RESTful APIs, FastAPI

Database: SQL, MySQL, MongoDB

Cloud and DevOps: AWS (EC2, S3, Lambda), Docker, Git, GitHub CI/CD

Core Skills: Data Structure & Algorithms, OOP, SDLC, Agile, API Design and Integration, Authentication (JWT)

PROJECTS

Carbon Footprint Calculator: HTML, CSS, JavaScript, FastAPI, Caddy, Apache

- Built a full-stack carbon calculation application, replacing a manual Excel-based process with an automated system.
- Designed and implemented FastAPI backend services for data processing, and carbon calculations.
- Developed a document pipeline to extract structured data from PDFs and generate Excel reports.

Call-Off Automation System: Python, FastAPI, Whisper, GoldDB, Docker

- Developing a system to convert voice-based HR call-offs into structured reports using Whisper
- Designing backend workflows for audio processing, transcription, and structured data extraction.

CartRush: React, Node.js, Express, MongoDB, Stripe

- Developed a full-stack e-commerce application with authentication, cart, and payment integration.
- Integrated Stripe for secure transactions and built REST APIs for order management.

LinkUp: React, Node.js, Socket.io, Redis, Docker

- Developed a real-time chat app with one-to-one and group messaging.
- Implemented Web Sockets for real-time communication and Redis for efficient message queueing.
- Containerized the application using Docker for portability and deployment efficiency.

WORK EXPERIENCE

Junior Developer (Contract), University at Buffalo: Feb 2026 – Present

- Built and deployed a carbon calculation application, replacing manual workflows with an automated application.
- Building a shared internal framework to standardize architecture across projects.
- Developing a speech-to-text automation system to streamline HR workflows.
- Leveraged AI agents and data connectors to improve data workflows and IT operations.

Coding Assistant, University at Buffalo, Buffalo, New York: June 2025 – December 2025

- Developed Python ETL pipelines to extract, clean, and structure recipe PDFs into analyzable datasets.
- Automated ingredient-level carbon footprint calculations and aggregated totals for campus dining recipes.
- Built robust Python workflows to efficiently process large-scale recipe data, ensuring consistent and accurate results.

Software Engineering Intern, Compssoft Technologies, Bengaluru, India: June 2023 – December 2023

- Developed full-stack applications using React.js and Node.js, delivering scalable and modular solutions.
- Designed and integrated REST APIs with MongoDB and SQL databases.
- Participated in Agile development cycles, including code reviews, debugging, and performance optimization.
